

ABSTRACT OF THE DISCLOSURE

A femoral intramedullary rod system capable of treating a variety of femoral bone
5 fractures using a uniform intramedullary rod design. The system generally comprising an
intramedullary rod defining an opening having an upper surface and a transverse member
including a bone engaging portion and a connection portion defining a thru-hole with the nail
sized to pass therethrough. A pin is selectively coupled to the transverse member to rigidly
assemble the transverse member to the nail when the nail is passed through the thru-hole and
10 the pin is received within the opening.
